

The Sequence Training Solution

Customized Training for Manufacturing Operations

Sequence is now offering hands-on training for pharmaceutical manufacturing operations. Our fully functional mock pharmaceutical facility allows us to train teams in five key areas: Facilities, Utilities, Equipment, Computerized Systems and QC Lab.

Sequence has spent the last 23+ years offering consulting services in Commissioning, Qualification and Validation (CQV) and Digital Solutions for some of the top pharmaceutical manufacturers in the world. This in-depth understanding of equipment and processes equips our team with the ability to teach the concepts as well as develop customized curriculums that are easy to understand and immediately impactful in terms of product quality, patient safety and driving results to the bottom line.

Sequence offers both standard curriculum courses and customized course options to fit a variety of needs. A key benefit of customized training at Sequence is our ability to incorporate your internal organization's SOPs and other procedures to develop a personalized program for your team.

The inherent benefits of our hands-on approach to training include:

- Improved Skill Retention and Practical Understanding
- Increased Compliance with Regulatory Standards
- Reduction in Human Errors
- Enhanced Problem-Solving and Critical Thinking
- Better Equipment Handling and Maintenance
- Increased Safety Awareness
- Faster Onboarding and Productivity

What Our Attendees Have to Say: Lessons Learned and Key Takeaways

"I realize now that the smallest lapse in care can have devastating effects"

"I had no experience with downstream so I have learned a lot about the equipment more than anything. Learning what the pumps go to, the direction the buffers go and much more."

"I have a better understanding of the equipment and how it is used for the product we are making."

"I now have more confidence in hands on manipulation of systems, single and multi use and background knowledge"

"Be more confident and speak up if you see something wrong"

"Going slow helps with consistency and thoroughness"

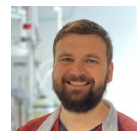

“ Jake, Brittany, and Nick were very informative, interactive, uplifting, and entertaining. They made learning fun and appealed to all learning styles. Awesome class and I would definitely do it again!

Meet the Training Team

The training team at Sequence has decades of on-site experience supporting our biopharmaceutical clients. This insight brings a critical level of effectiveness and perspective to our training programs.
